SUMMARY

Software Engineer with 2+ years of experience building scalable & AI - enabled web applications and backend services using Java, Python, JavaScript, and cloud technologies. Skilled in developing microservices and REST APIs that improve system reliability and performance. Proven track record of delivering production features and collaborating in Agile teams to ship high-quality software.

EDUCATION

Master of Science in Computer Science | *University of Illinois Chicago*

Aug 2024 - May 2026

Bachelor of Engineering in Computer Engineering | *University of Mumbai*

Aug 2018 - May 2022

TECHNICAL SKILLS

Programming Languages and Concepts: Python, Java, JavaScript, C, C#

Backend & Frameworks: Spring Boot, Hibernate, JSF/J2EE, Node.js, Express, ASP.NET, GraphQL, PHP, ActiveMQ

Frontend: React.js, HTML, CSS, Bootstrap, REST API Integration

Data Management & Cloud Analytics: MySQL, PostgreSQL, MongoDB, MariaDB, Snowflake

DevOps & Tools: Docker, AWS, WalkMe DAP, Git, GitHub, GitLab CI/CD, Postman, Jira

PROFESSIONAL EXPERIENCE

Technical Support Graduate Assistant | *Technology Solutions - University of Illinois Chicago*

May 2025 - Current

- Administered and maintained LTI integrations and third-party tool configurations across Blackboard and Canvas for 20,000+ users, managing OAuth workflows, deep-link provisioning, and platform data operations to ensure seamless LMS interoperability
- Diagnosed and resolved 30-40 Tier-2 escalations/week involving authentication failures, LTI launch errors, and cross-platform data inconsistencies using log-based root cause analysis, reducing repeat incidents by 20% and maintaining SLA compliance.

Software Engineer Intern | *Bectran Inc., Illinois*

May 2025 - Aug 2025

- Resolved invoice generation and dynamic email template variable defects across microservices and shared modules, improving accuracy of 50+ monthly customer-facing documents and reducing manual corrections by 30%
- Migrated core enterprise applications to JDK 17/Tomcat 10 compatibility, by incorporating AI integration with Amazon Q to refactor 200+ source files and dependencies; boosted system performance by 25% and strengthened security compliance.
- Standardized system report exports by converting Excel outputs to CSV via SFTP, eliminating 80% of compatibility issues in downstream processing and accelerating reporting workflows.

Senior Software Engineer | *LTIMindtree, Mumbai*

Jun 2022 - Jul 2024

- Developed WalkMe-based automation and in-app guidance scripts to support digital transformation, reducing process completion time by 55%.
- Delivered 47+ in-app automation and walkthrough flows with JavaScript/jQuery for platforms like Dynamics 365 CRM, JD Edwards, and Salesforce, reducing ServiceNow ticket submissions by 45%.
- Collaborated with 5 cross-functional teams in an Agile environment to define sprint scope, conduct UAT, and execute releases, translating requirements into production-ready features.
- Employed WalkMe Insights to deliver adoption analytics (funnels, completion rates, drop-offs), pinpoint workflow bottlenecks, and drive changes that improved system stability.
- Developed features for a .NET Core web application to enable a direct marketplace for rural businesses, reducing reliance on third-party vendors by 50%

Software Developer Intern | *Fouses IT Solutions, Patna*

Jun 2021 - Aug 2021

- Engineered a full-stack dynamic news portal using PHP and MySQL with role-based modules for admins and users to publish, manage, and curate content. Integrated Google OAuth 2.0 for secure, seamless user authentication.
- Constructed interactive features such as likes, comments, keyword-based search, and category-level filtering, improving user engagement improving discoverability by 40%

PROJECTS

CaseQuery - Legal RAG Assistant | *Sentence-Transformers, FAISS, BM25, OpenRouter, Python*

- Built CaseQuery, a retrieval-augmented legal QA system over CUAD contracts and Illinois CAP case law, using FAISS-indexed dense embeddings and BM25 sparse retrieval to surface relevant passages and generate source-attributed answers via Llama-2.
- Implemented an end-to-end evaluation pipeline comparing FAISS vs BM25 (Recall@k, MRR) and RAG vs zero-shot; delivered an interactive CLI outputting answers, supporting passages, and similarity scores, achieving a BERTScore of 0.857.

Inn-Sight Web Application | *MongoDB, Express, React.js, Node.js, RESTful API, Axios*

- Built a full-stack accommodation booking platform (MERN) with a responsive React 18 UI, component-based architecture, and React Router navigation, implementing JWT authentication and protected user flows for browsing listings/ managing bookings.
- Designed and implemented 15+ RESTful APIs in Node.js/Express for users, places, and bookings; modeled and validated data with Mongoose, integrated Axios-based client-server data flow, and supported scalable image handling via Multer + AWS S3.

MedGuide - AI | *LangChain, Pinecone, AWS EC2, Docker, Flask, OpenAI APIs*

- Built a medical guidance assistant leveraging LangChain with OpenAI LLMs, Pinecone vector database for semantic retrieval over medical documents; implemented PDF ingestion and sentence-transformer embeddings for accurate medical QA.
- Designed Flask web application with end-to-end RAG workflow for document retrieval and response generation; deployed on Amazon EC2 with Docker containerization for scalable production deployment.
